Cost-effective Analysis of Demand- and Supply-side Education Interventions: The Case of PROGRESA in Mexico

By David P. Coady and Susan W. Parker (2004)

Presentation by Mohammadreza Farajpour

Introduction

Question

- Most cost-effective way of improving access to education for poor households in developing countries
- Data
 - PROGRESA
 - School-level data, SEP

Identification

$$S_{it} = \sum_{t=0}^{3} \alpha_{0t} + \alpha_1 T_i + \alpha_2 T_i R_2 + \alpha_3 T_i R_3 + \sum_{j=1}^{J} \beta_j X_{jit} + \varepsilon_{it}$$

- Control variables:
 - child's age
 - Mother and father education levels
 - Marginality level of the community
 - Community agricultural wage
 - Distance to the nearest municipal center
